DSI Certification Application

What is assessed during the screening?

A screening is a standard part of the certification process at DSI. If it needs to be reapplied through Validata, various components will be assessed. Below is an overview of the different screening elements that Validata checks. The components screened by Validata depend on the type of application or certification change.

See which elements are assessed during a screening

Component during screening / Type of application or modification	Request new certification	Change employer	Change register	Change employer + register	Request additional certification	Activate passive certification
Identification Document (ID)	✓	✓	✓	✓	✓	✓
